KINTARO
SERVICE PLATFORM

A service management platform with a built-in gateway for API orchestration, security protocols, and diagnostic alert mechanisms—all shown in an easy-to-use portal.

A Single Entry Point For Digital Excellence

- **Stay Secure:** Kintaro acts like a firewall, blocking undesired traffic and malicious requests.
- **Optimize Operation:** Avoid interruptions. API changes do not require app updates.
- **Take Action:** Enable traceability for triage and performance
- **Manage Network Traffic:** Kintaro acts as a proxy load-balancing server to other servers and components.

Provide An Optimal App Experience

Flexible to your business logic, Kintaro allows you to minimize latency and improve security for a better app experience. Utilize this service management platform to manage parameters for each API, organize new and existing APIs in a single library, identify incoming errors, and more. Join other leading global apps and utilize Kintaro services today.

Feature Highlights

Authentication
Authenticate and validate requests using a predefined set of credentials.

Load Balancer
Prevent overload by distributing application traffic across servers for smooth operation.

Monitor Traffic
Monitor all transactions in and out of Kintaro to track and identify issues.

Business Rules
Meet business requirements by structuring your application with microservices.

Service Routing
Automatically route requests to the right end server.

Orchestration
Integrate and wrap APIs into a single offering.

Encryption
Protect user privacy and personal information.
